

ADM THREE POINT MOUNTED DISC MOWER

The ADM Disc Mower from AgLine is a versatile mower that works in all types of conditions, including wet grass. This rear-mounted product features a hydraulic cylinder that provides hydraulic lifting of the cutter bar, and the mower folds vertically for transport. A special designed cutter bar gives a clean and even cut. The ADM series is built heavy enough to handle your hay mowing needs, at a price that cuts through the competition.

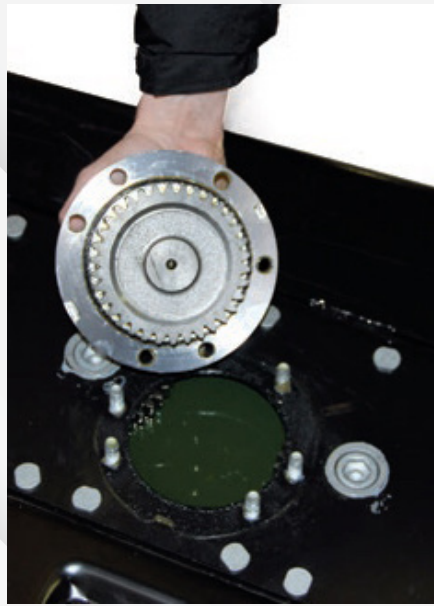

A safety release ensures automatic disengagement in the event of impact. Re-engagement is automatic when operator backs up; no special intervention is needed.

A compensating spring provides excellent adjustment to the weight of the mower, which reduces the pressure on the ground and ensures a perfect cut without damaging the grassy scalp.

The well-shaped cutter bar features high-strength steel gears in an oil bath and a wear-resistant chassis. The blades are protected by deflection shields in the overlap zone.

The discs are shaped from special steel, designed for exceptional penetration into all types of forage. The dismantling of the disc mountings with their bearings and pinions is extremely easy for quick and simple maintenance.

Three point hitch is easy to attach, and a parking lock lifts and stabilizes the hitch for a quick and safe attachment.

PRODUCT SPECIFICATIONS

	ADM 108	ADM 109	ADM 110
Working width - cm	8'4"	9'4"	10'5"
Number of discs	6	7	8
Number of knives	12	14	16
